

I/O and Debugging Assignment

Snippet 1

1. Original error: Expected type 'str', got 'int' instead, PEP 8: W391 blank line at end of file
2. fix: `a = "Hello" + str(1)`
3. `add end = db.close()`
4. Output file created successfully: output.txt
5. Add output.txt created Hello1, How do you do?

Snippet 2

Original error: Indent expected:, Unresolved reference 'a', ':' expected, Indent expected, Name 'i' can be undefined, Function name should be lowercase, Parameter 'a' value is not used

fix: add colon, fix indents, and fix uppercase.

```
def find_total(a):
```

```
    for i in a:
```

```
        print(sum(i) * 2)
```

To verify it functions, add to the end with no indent: `find_total([[1,2],[3,4]])`, prints 6 and 14.
